Strategic resilient IT architecture design

Design a resilient IT architecture to support business resilience objectives

Are you looking for a robust, resilient architecture design to enable rapid adaptation and response to risks, while strengthening IT functions and maintaining continuous business operations? Constantly changing business needs, increased security risks and limited availability of the right skills can pose significant challenges when you’re trying to design a cost-effective, yet resilient IT architecture.

IBM Resiliency Consulting Services resilient architecture design can help you create a standards-based architecture that blends continuity, availability and recovery techniques within a security-rich environment. IBM brings expertise, tools and time-tested methodology to define a cost optimized solution that includes a road map for implementation and ongoing operations. IBM resilience experts work with your existing resources—including both IBM and non-IBM equipment—to help you create a cost-effective resilient architecture design that maximizes your investments.

Integrating continuity, security and recovery strategies

From concept to completion, our experts work with you to create a resilient IT architecture design that meets and integrates your specific requirements for availability, security and recoverability. We can help you create an infrastructure design that supports a holistic view of resilience across your enterprise, including business strategies, organization, processes, applications and data, technology and facilities.
Supporting recovery objectives and strengthening IT infrastructure

Focused on your goals and objectives, IBM can help you create a resilient architecture designed to support your critical business operations in various disruptive scenarios. At the same time, a resilient architecture can help strengthen your entire IT infrastructure—giving you confidence in your ability to respond to opportunities, risks and changing requirements in a manner consistent with your overall resilience and business strategy.

Access to the right tools and expertise

Using time-tested methodologies and tools, our highly skilled experts help you define a cost optimized, standards-based solution that balances risk mitigation with your budgetary and staff resources. We can develop design specifications based on your facilities, hardware, software, network, staffing, governance and management requirements, to maximize your resilience investments.

Why IBM?

IBM offers a comprehensive resilience solution covering strategy, organization, business processes, applications and data, technologies and facilities. With more than 40 years of business continuity and disaster recovery experience, IBM is uniquely qualified to help ensure consistent quality and standards. Our business resilience framework offers a time-tested, value-added approach to help you understand your current resilience capabilities, identify gaps and strategize for the future.
