The IBM Information Protection Services - onsite data protection service environment is shown above.

Highlights

- **Provides managed data protection service for your data-center servers, applications and databases worldwide**
- **Offers flexible restore point and restore time options**
- **Pay-as-you-go service pricing**
- **Supports your business and compliance efforts**

Creating more reliable, security-rich backups as data volume and complexity grow

Explosive data growth, complexity and solution scalability are among the most persistent challenges in the world of data protection. Many companies are forced to protect their information assets with traditional solutions that are plagued by low backup success rates.

Companies also face issues of appropriate IT resource utilization, effectiveness and availability. As the volume and complexity of business data grow, companies often need help keeping up.

Supporting data centers around the world.

IBM Information Protection Services—onsite data protection service is a managed tape-and/or disk-based data protection service used to back up mission-critical data in hosted or customer data centers around the world. With an established presence in most major geographies, the onsite data protection service is designed to be an essential part of your company's overall data protection strategy. The onsite data protection service helps provide powerful on demand backup and restore services that protect files, databases and applications. With industry-standard hardware and software and dedicated specialists, the onsite data protection service helps address your company's business objectives for data protection.

Helping protect your data from most types of loss

The onsite data protection service helps enable rapid data restoration in most data loss scenarios—from everyday problems to catastrophic site failures. It includes the necessary

hardware, software, installation, reporting and support to effectively back up and restore data. Clients with aggressive restore time objectives and short backup windows may find that a disk enabled onsite data protection service improves backups and restores and keeps mission-critical applications running. For users who need multiple backups daily, the onsite data protection service offers an option for user-specified backup intervals. Significant benefits

- *Offers comprehensive backup and restore services for critical files and databases*
- *Helps secure data with a variety of encryption options and dedicated tape media*
- *Provides world-class support with 24x7 monitoring and management*
- *Supports your business and compliance efforts*
- *Reduces the need for capital investments in hardware or software*
- *Provides important management functions and visibility into your service environment, status and trending using our Web-based portal*

- *Supports most major formats including Oracle, SAP, IBM Informix[®], Sybase, Microsoft[®] SQL, Microsoft Exchange, IBM DB2[®] and IBM Lotus Notes[®] formats*

Why IBM?
