

# **Transparent data migration facility (TDMF)**

## **Advantages**

### **Designed for a simple and unified solution**

- Multiple migrations – in one simple console across open systems
- Heterogeneous support of storage subsystems/arrays
- Support for any major platform – z/OS, Unix, Windows, Linux
- Move data locally or globally over TCP/IP

### **Satisfy business continuity mandates and service level agreements (SLA 's)**

- Online data migration—ensures applications are continuously available
- Uptime and performance assurance enables compliance with business continuity mandates
- Free up planned downtime window for other uses

### **Mitigate costs and risks**

- Cost effective host-based solution – no additional hardware or software requirements
- Improve your total cost of ownership (TCO) – eliminate delays in upgrading and optimizing storage
- Automated processes designed for easier, faster, less costly migration
- Validates to protect against data corruption
